

Orbit Digital Supplier Proposal

Fictional procurement request

A fictional university seeks a secure supplier evaluation portal for 200 procurement users. The portal must import proposal PDFs, support role-based access, show traceable scores, and export results. Delivery is expected within 16 weeks.

Executive summary

Orbit Digital emphasizes prior public-sector delivery and a managed portal for document review, scorecards, and export.

Proposed solution

The proposal describes configurable reviewer screens and a managed database. It says the solution integrates with the university ERP, but gives no interface specification, data mapping, or failure recovery design. A 300-user load test is offered.

Implementation approach and timeline

A 14-week plan covers discovery weeks 1-3, build weeks 4-10, test weeks 11-12, and rollout weeks 13-14. A project manager, three developers, and a support specialist are assigned. ERP dependencies are flagged but no fallback milestone is shown.

Orbit Digital Supplier Proposal

Price and assumptions

Implementation fee: USD 110,000. Annual support: USD 19,000. Total first year: USD 129,000. Includes hosting and training. ERP customization is time-and-materials at USD 135 per hour.

Security, compliance, and risk controls

Controls include SSO, encrypted storage, weekly backups, role permissions, annual penetration testing, and a 90-day audit trail. Incident notification timing and privacy deletion policy are not stated.

Support, experience, and references

A 24-hour help desk and one-hour critical response target are offered. Orbit lists five government deployments and three named reference organizations with contact details.

Key delivery risk

ERP scope and customization cost are uncertain; security response timing is missing.
